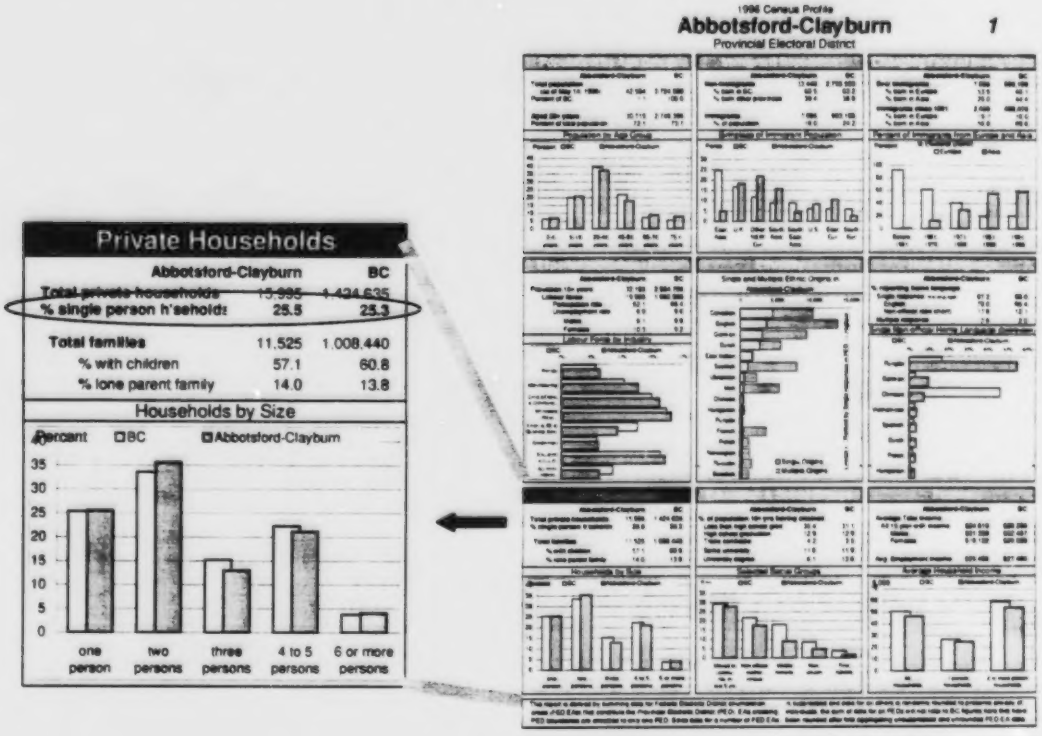
Correction Provincial Electoral District Profiles, March 2000



The 'Private Households' section in the lower left of each Profile page contains an error. The second line of the table, '%single person h'seholds', should read as per the attached table. Note that the chart below the table was unaffected. This correction applies to our printed publication, *Provincial Electoral District Profiles, March 2000*. Our Web publication of the profiles reflects the correction.

Also, **Yale-Lillooet** is the correct name for the Electoral District we had identified as Yale-Similkameen. The name we used had been proposed but was dropped in favour of Yale-Lillooet after we had started to work with the file. Unfortunately, we did not incorporate the final name in our printed publication or the Web site tables. The correct name now appears on the Web profile page.

We apologise for any inconvenience this may have caused.

Notes

Introduction

This document is the latest in a series of census-based profiles of British Columbia Provincial Electoral Districts (PED) produced by BC STATS. Our print publication based on the 1991 Census was the first to feature both graphic profile pages and a series of tables showing specific characteristics across all PEDs. Single-page graphic profiles of current PEDs, based on the 1991 and 1996 Censuses, are posted on our web site.

http://www.bcstats.gov.bc.ca

The initial set of 1996 Census-based graphic profile pages conform to the riding boundaries in effect for the general provincial election held on May 28, 1996 and for subsequent by-elections. This report provides a demographic profile of PEDs based on the boundaries proposed by the *Electoral Boundaries Commission on* June 3, 1999. These boundaries will be in effect in the first general provincial election following the date of their adoption.

Methods and Data quality

Readers should note that, for a number of reasons, the population counts published here do not exactly match that published by the Electoral Boundaries Commission. In addition, the sum of the ridings themselves does not total to the BC 1996 Census population published by Statistics Canada.

To calculate total populations for each PED, the Commission relied on population data from the 1996 Census at the smallest available level of geographic detail. This allowed the most accurate possible estimation of the effect of boundary changes on included population.

"Enumeration areas" (EA) are the basic collection area for a census and for each EA Statistics Canada produces profile data. In densely populated urban areas some data is available on a block-by-block basis. However, that "block face" data does not reveal any characteristics beyond population and dwelling counts, whereas EA profiles contain a rich array of demographic information.

The best estimates of total population in a PED will be based on populations of EAs and, where available, block face populations. The *Electoral Boundaries Commission* used population data provided by BC STATS based on this approach. Table 1 contains BC STATS' estimates of 1996 Census populations for the proposed PEDs. This data adds up precisely to the provincial total as "exact" population and dwelling counts are published for all the EAs and block faces in the province.

The remainder of this publication relies solely on EA based data published by Statistics Canada. This loss of geographic definition in urban centres is in exchange for a rich array of demographic characteristics. Some idea of the difference is provided in Table 1. As we move to the right from the column with EA and block face data we first encounter unrounded EA populations. This is a measure of the loss of the block-face information. Moving

again to the right we have the result of figures that have been randomly rounded for each EA and then added to produce an electoral district total. This is a measure of the loss incurred as a result of a deliberate obscuring of the data by Statistics Canada so that individual responses to a census cannot be identified.

Confidentiality

In order to preserve confidentiality of individuals when publishing census results Statistics Canada employs rules of suppression and random rounding. The graphic profiles and data tables that follow are based on published data for non-overlapping groups of EAs that, when combined, most closely follow the PED boundaries. No data are published for EAs with a population of less than 40. For income tables, no data are published for EAs with a population of less than 250. All published data (except for one table with population and dwelling counts) are randomly rounded to multiples of 5 (numbers ending in 5 or 0). The charts and tables published in this document are based on figures that have first passed the suppression barrier and then been rounded at the EA level, before being aggregated to reflect riding totals.

Graphic Profiles

We have produced a graphic profile page for each of the 79 new PEDs. These pages result from data assembled from the table section that follows. The actual source table(s) for each panel are shown in Figure 1.

The charts for ethnic origins and home language are sorted on the prevalence of these characteristics in the PED that is being profiled. We accomplished this by using detailed listings of the characteristics from the *Profile* series of Census products available from Statistics Canada. This is the first time we have had the ability to capture and organize the information in this way. We believe this presentation is much more useful and well worth the extra effort of production.

Official languages in Canada are English and French. The home language table above the chart identifies what portion of the population speaks a single non-official language at home. This is the group that is featured in the chart. There is no breakout when more than one laguage was identified (multiple response) and English and French are not candidates for the chart. In many areas of the province a very small portion of the population will be the subject of the chart. In other areas approximately half the population qualify.

We chose not to publish the *detailed* ethnic origin and language tables in this report as the size of the tables did not conform to that of the others. These tables are to be found on our Internet site in the 1996 Census area. Users may wish to download them and import them into a spreadsheet or database.

Tables

Each of the tables presented contains data summed to each of the 79 new PEDs. The "Report Total" is the sum of the PED data. The last line in each table provides a figure that Statistics Canada has calculated from unrounded EAs and then rounded only as a total. The difference between the "Report Total" and the "BC total from unrounded data" provides an indication of the quality of the tables.

Custom tables available

BC STATS regularly receives or purchases census data at the EA level and, based on translations of the EAs into different administrative boundaries, produces tables for other administrative regions within the province. The alternative—pur-

Names of census tables used to create profile pages. Census tables are presented in alphabetic order in the table section of this document. BC STATS can generate tables for areas within ridings - neighbourhoods that comprise one or more Federal Electoral District Enumeration Areas (FED EA). Fees for this service reflect our resource usage and will vary with each request.

chasing data for each of the required geographic systems so that region totals could be calculated from unsuppressed and unrounded components—would provide superior estimates but at a significant cost.

One benefit of our cost conscious approach is that we can produce similar output tables for components of any region. For instance, users may contract with BC STATS for the production of similar tables for neighbourhoods within ridings.

This report is derived by summing data for Federal Electoral District enumeration areas (FED EAs) that constitute the Provincial Electoral District (PED). EAs crossing PED boundaries are allocated to only one PED. Since data for a number of FED EAs is suppressed and data for all others is randomly rounded to preserve privacy of individuals, the sum of data for all PEDs will not total to BC figures here that have been rounded after first aggregating unsuppressed and unrounded FED EA data.

This report is derived by summing data for Federal Electoral District enumeration areas (FED EAs) that constitute the Provincial Electoral District (PED). EAs crossing PED boundaries are allocated to only one PED. Since data for a number of FED EAs is suppressed and data for all others is randomly rounded to preserve privacy of individuals, the sum of data for all PEDs will not total to BC figures here that have been rounded after first aggregating unsuppressed and unrounded FED EA data.

This report is derived by summing data for Federal Electoral District enumeration areas (FED EAs) that constitute the Provincial Electoral District (PED). EAs crossing PED boundaries are allocated to only one PED. Since data for a number of FED EAs is suppressed and data for all others is randomly rounded to preserve privacy of individuals, the sum of data for all PEDs will not total to BC figures here that have been rounded after first aggregating unsuppressed and unrounded FED EA data.

This report is derived by summing data for Federal Electoral District enumeration areas (FED EAs) that constitute the Provincial Electoral District (PED). EAs crossing PED boundaries are allocated to only one PED. Since data for a number of FED EAs is suppressed and data for all others is randomly rounded to preserve privacy of individuals, the sum of data for all PEDs will not total to BC figures here that have been rounded after first aggregating unsuppressed and unrounded FED EA data.

This report is derived by summing data for Federal Electoral District enumeration areas (FED EAs) that constitute the Provincial Electoral District (PED). EAs crossing PED boundaries are allocated to only one PED. Since data for a number of FED EAs is suppressed and data for all others is randomly rounded to preserve privacy of individuals, the sum of data for all PEDs will not total to BC figures here that have been rounded after first aggregating unsuppressed and unrounded FED EA data.

This report is derived by summing data for Federal Electoral District enumeration areas (FED EAs) that constitute the Provincial Electoral District (PED). EAs crossing PED boundaries are allocated to only one PED. Since data for a number of FED EAs is suppressed and data for all others is randomly rounded to preserve privacy of individuals, the sum of data for all PEDs will not total to BC figures here that have been rounded after first aggregating unsuppressed and unrounded FED EA data.

This report is derived by summing data for Federal Electoral District enumeration areas (FED EAs) that constitute the Provincial Electoral District (PED). EAs crossing PED boundaries are allocated to only one PED. Since data for a number of FED EAs is suppressed and data for all others is randomly rounded to preserve privacy of individuals, the sum of data for all PEDs will not total to BC figures here that have been rounded after first aggregating unsuppressed and unrounded FED EA data.

HOUSEHOLDS

A person or group of persons who occupy the same dwelling unit. Household members temporarily absent on Census day are considered part of their usual household. Each person is a member of only one household for Census purposes. Households are private or collective (housing the institutional population). **All references to households in these tables are speaking of private households only.** (See DWELLINGS for further explanation of collective households.)

Household Characteristics:

Family Households – Private households with one or more Census families. Tables: HSHOLD2, HSHOLD6.

Household Income – Total income of all members of private households who are 15 years and over. Table: INCOME4.

Non-family Households – Private households of one person or a group of persons not meeting the Census family definition. Tables: HSHOLD2, HSHOLD6.

FAMILIES

Two definitions of families are used by the Census. The **Census Family** is a now-married couple or a common-law couple, with or without never-married sons or daughters (regardless of age) or a lone parent of any marital status with one or more never-married sons or daughters, living in the same dwelling. An **Economic Family** is a group of two or more persons living in the same dwelling and related by blood, marriage, common-law or adoption. **All references to families in these tables is to Census Families unless specifically described as Economic Families.**

Family Characteristics:

Census Family Income – Total income of Census family members 15 years and over. Table: INCOME3.

Children – Never married sons or daughters (regardless of age) by blood, marriage or adoption living in the same household as one or both parents. Tables: AGE1, AGE2, AGE3, FAM2, FAM2CLC, FAM2FLP, FAM2HW, FAM2LP, FAM2LP, FAM2MLP, FAM2NMC, HHTASK2, IMMIG1, LABOUR6.

Common-law Couples – Two people living together as husband and wife but who are not legally married to each other. Tables: FAM1, FAM2CLC.

Husband-wife Families – Census families where there is a husband-wife couple, either legally married or common-law. Tables: FAM1, FAM2CLC, FAM2HW, FAM2NMC, SUMMARY1.

Husband-wife Families Income – Total income of husband-wife family members including both legally married and common-law couple families. Table: INCOME3.

Lone-Parent Families – Census families with unmarried children but no spouse present in the household. Table: FAM1, FAM2FLP, FAM2LP, FAM2MLP, HSHOLD6, SUMMARY1.

Now-married Couple – Census families where there is a legally married husband-wife couple. Tables: FAM1, FAM2NMC.

DWELLINGS

Dwelling refers to a set of living quarters in which a person or group of persons reside. Dwellings can be collective or private. **All references to dwellings in these tables are speaking of occupied private dwellings only.** Examples of collective dwellings are hotels, motels, school residences, missions, hostels, jails, chronic hospitals and military camps.

Dwelling Characteristics:

Apartments Dwellings, 5+ Storeys – A dwelling unit that is in a high-rise apartment building of five or more storeys. Tables: DWELL1, DWELL2.

Band Housing – On reserve housing occupied by band members. Tables: DWELL1, DWELL4.

Moveable Dwellings – A single dwelling, designed and constructed to be moved on its own chassis and capable of being moved on short notice, but may be on a foundation, blocks, posts or pad and covered with a skirt. Also included are tents, RV's, travel trailers and houseboats. Tables: DWELL1, DWELL2.

Other Dwellings – Single dwelling units in row houses, semi-detached houses, duplexes, apartment buildings with fewer than 5 storeys, attached to non-residential buildings or in houses with multiple suites. Tables: DWELL1, DWELL2.

Owned – A private dwelling which is owned or being bought by a member of the household and is not Band housing. Note: a condominium which is rented by the occupants is treated as rented. Tables: DWELL1, DWELL2, DWELL3, DWELL4, DWELL5, HSHOLD6, SUMMARY1.

Period of Construction – The time period in which the building or dwelling was originally constructed. Tables: DWELL3, DWELL4.

Rented – A private dwelling which is not owned by some member of the household and is not Band housing. Included here is cooperative housing which is jointly owned by members and occupied under a lease agreement. Note: a condominium which is rented by the occupants is treated as rented. Tables: DWELL1, DWELL2, DWELL3, DWELL4, DWELL5, HSHOLD6, SUMMARY1.

Single Detached Dwellings – A single dwelling that is not attached to any other dwelling or structure, except its own garage or shed. Single family dwellings that contain two or more suites are included in "Other Dwellings". Tables: DWELL1, DWELL2.
